BLOOD BANK MANAGEMENT SYSTEM

Branch Coverage Report

Control-flow coverage from the complete automated suite

86.82%	191 / 220	29	95
Branch coverage	Branches covered	Partial branches	Tests executed

Measurement method

Branch arcs were collected by Coverage.py with --branch and --concurrency=thread during the full test suite. Test files, migrations, package initializers, ASGI and WSGI boot files are excluded from the source denominator. A branch is covered when execution takes that control-flow path; partial branches have only one of multiple paths exercised.

Branch coverage by source file

Source file	Covered	Total	Coverage
accounts/decorators.py	2	2	100.0%
accounts/forms.py	8	8	100.0%
accounts/views.py	30	30	100.0%
bloodbank_requests/compatibility.py	6	6	100.0%
bloodbank_requests/forms.py	4	6	66.7%
bloodbank_requests/services.py	18	24	75.0%
bloodbank_requests/views.py	20	22	90.9%
config/middleware.py	8	8	100.0%
config/settings.py	3	6	50.0%
donations/forms.py	9	12	75.0%
donations/models.py	2	2	100.0%
donations/reception.py	36	40	90.0%
donations/views.py	19	26	73.1%
donors/eligibility.py	10	10	100.0%
donors/forms.py	12	14	85.7%
donors/views.py	4	4	100.0%

Interpretation and follow-up

The suite exercised 191 of 220 measured branch paths (86.82%). 29 paths remain uncovered. Follow-up areas include alternate account flows, donor eligibility decisions, reception form/error states, and reservation retry handling. The supplied plan sets no numeric branch-coverage threshold.

BLOOD BANK MANAGEMENT SYSTEM

Code Coverage Report

Statement coverage from the complete automated suite

95.36%	1068 / 1120	5	95
Line / statement coverage	Statements covered	Django apps / config	Tests executed

Measurement method

Coverage.py 7.17.2 measured Python code while the complete Django suite ran. Test modules, migrations, package initializers, ASGI and WSGI boot files were omitted from the reported source denominator. Coverage is a test-execution metric; it is not proof that uncovered code is defective or that covered behavior is correct.

Command: coverage run --branch --concurrency=thread --source=accounts,donors,donations,bloodbank_requests,config manage.py test --verbosity=2

Coverage by source file

Source file	Covered	Total	Coverage

donors/models.py	20	20	100.0%
donors/urls.py	3	3	100.0%
donors/views.py	23	23	100.0%

Interpretation

Across the measured production source, 1068 of 1120 executable statements were covered (95.36%). Coverage.py's branch-aware combined score is 93.96%; branch coverage is detailed in the separate Branch Coverage Report.

Lower-coverage areas include the unused bloodbank_requests.compatibility helper (0%), selected alternate account flows, and donor eligibility edge cases. Tests currently exercise exact-match compatibility through the reservation service rather than this standalone helper.
